*1 When scanning a document larger than A5 size at high resolutions over 600 doi, the scanning may fail due to insufficient memory. *2 The scanning speed differs depending on the host computer, the operating system, the application, the measuring method, the quantity of data in the image, and the paper type. The scanning speed depends on a measuring method of Panasonic.

*3 Use "Thin paper mode" when scanning the document less than 40 g/m² (10.6 lb.).

*4 The power requirement differs depending on the country/area.

*5 About the environmental conditions of Imprinter Unit (KV-SS014), refer to the Installation Manual of Imprinter Unit. When printing in conditions outside of the imprinter unit's operating environment, the printing result may be faded or printing may not occur.

Raise Work Efficiency with Faster Scanning

High-Speed, High-Volume Scanning

A high-speed, high-volume ADF, which was made possible by advances in image processing technology, has increased the efficiency of processing large numbers of documents.

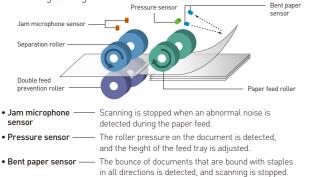

ADF 750^{sheets} (A4) (A3 500 sheets)

Reliable Paper Feed

ToughFeed

Document Protection

Multiple sensors check the paper feed conditions to automatically optimise the scanning of various documents while preventing them from being damaged.

Double Feed Retry

If a double feed was detected, the double feed retry function will return the documents to the feed tray automatically, then separate the double fed documents again and scan them.

returned to the tray.

separated, and scanned.

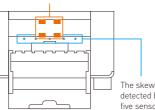

Double Feed Skip (DFS)

If double feed retry happens three times for the same document, retry will finish and display the error or the Double Feed Skip (DFS) function can be used to resume scanning

New Mechanical Deskew

The KV-S8147 corrects document skewing up to a maximum of 10 degrees. The sensors have also been increased to five in order to raise the accuracy of detection and de-skewing.

The tilt of the document is controlled by rollers on both sides.

mechanically before scanning

Movable Exit Tray

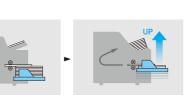

Movable exit tray and paper ejection control eliminate fluctuations in the paper exit of mixed scanning documents. Moving up and down of the feed/exit tray also shorten the scanning time.

Feed Tray The feed tray rises quickly and maintains the optimal pressing

force.

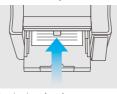

Exit tray

The exit tray maintains the optimal height from the exit trav to prevent exit luctuations.

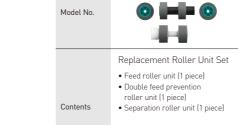

Even if skewed documents enter-

Skewing is reduced

Highly Durable Glass Coating

The use of a highly durable glass coating reduces vertical streaking of images due to the effects of paper dust, and decreases the required frequency of maintenance.

Easy Maintenance

Maintenance of the transport path is easier because the ADF door opens widely. Also, an LED light automatically turns on when the door is opened, so paper dust and other problems are easy to see.

Full-Colour LCD

An easy-to-see, full-colour LCD enables scanner settings and maintenance without having to use a PC.
